EPSON

- **Epson** (Seiko Epson Corporation) is a big **Japanese electronics** / printing company. They make **printers**, **scanners**, **projectors**, and many **kinds of inks**.
- **Epson's original** (genuine) inks are made specifically to work with **Epson printers**. They're tested to match **print heads and nozzles** well.

- Epson offers **dye-based inks** (bright colors, good for photos) and **pigment-based inks** (more permanent, resistant to water/light).
- Because of their refill-tank systems and large ink bottles, Epson inks can print many more pages before running out.
- Epson strongly advises using their **genuine inks. Non-genuine** (third-party or refilled) inks may damage the **printer**, **void warranty**, or give **inconsistent print**. results.
- Epson packaging often has features to verify authenticity **(holograms, QR codes, etc.).**
